The STI/HIV Testing Tool is a resource for GPs and other clinicians to support routine comprehensive testing for sexually transmissible infections (STIs) among ‘at risk’ patients.

**STEP 1**

Starting a conversation about sexual health testing

Offering routine STI/HIV testing helps patients feel more comfortable and willing to discuss their sexual health.

**Examples of how routine STI/HIV testing can be offered:**

**Young people (15–29 years):**

“STIs are very common among young people and they may not even know they have an STI. We encourage all sexually active young people to get tested regularly for

**Reproductive health consultations:**

“While you’re here for advice about contraception/cervical screening it’s a good time to talk about other areas of sexual health, like having a sexual health check-up…”

**Travel consultations:**

“Some people take risks when they travel overseas and that includes having unprotected sex. If you like, we could do a sexual health check-up before you go and when you return.”

**Hepatitis B vaccination:**

“Have you had a hepatitis B vaccination? It protects against an infection that can be sexually transmitted. Do you want to talk about this today?”

**Risk assessment (sexual history)**

Ask these questions in the following order to identify potential risks and which tests to perform:

“I’d like to ask you some questions about your sexual activity so we can decide what tests to do:”

- When did you last have sex?
- Was that with a regular or casual partner?
- Was it with a man, a woman, or both?
- Did you use condoms?
- When you had sex, was it vaginal, oral or anal sex?
- When did you last have sex with a different person?
- Did you use condoms with them?

**Note:** STI/HIV testing requires only ‘informed consent’. In NSW HIV ‘pre-test counselling’ is no longer required.

**STI/HIV Testing Tool available at:**

### Recommendations from the Australian STI Management Guidelines

#### WHO is the patient?

**Young people (15–29 years)**

- **CHLAMYDIA**
  - Annually
- **HEPATITIS B**
  - Confirm HIV immune status (history of prior vaccination or serology) and vaccinate if not immune
- **GONORRHOEA**
  - Consider according to risk assessment and local STI and HIV prevalence
- **SYPHILIS**
  - HIV
  - Offer to everyone requesting testing
- **HIV**
  - Consider a low threshold for offering testing for all infections – risk assessments assist with appropriate STIV/BV testing but are difficult to implement in some situations

**Asymptomatic people requesting STI/HIV testing**

- **CHLAMYDIA**
  - Annually or more often according to risk assessment
- **HEPATITIS B**
  - Confirm HIV immune status (history of prior vaccination or serology) and vaccinate if not immune
- **GONORRHOEA**
  - Consider according to risk assessment and local STI and HIV prevalence
- **SYPHILIS**
  - Offer to everyone requesting testing

**Aboriginal and/or Torres Strait Islander people**

- **CHLAMYDIA**
  - Annually or more often according to risk assessment
- **HEPATITIS B**
  - Confirm HIV immune status (history of prior vaccination or serology) and vaccinate if not immune
- **GONORRHOEA**
  - Consider according to risk assessment and local STI and HIV prevalence
- **SYPHILIS**
  - Offer to everyone requesting testing

**Men who have sex with men (MSM)**

- **CHLAMYDIA**
  - 3-monthly for men who have had any type of sex with another man in the last 3 months
  - MSM who are not sexually active or in monogamous relationships may be tested less frequently, but at least annually
- **HEPATITIS B**
  - Confirm HIV and HIV immune status (history of prior vaccination or serology) and vaccinate if not immune
- **HEPATITIS B**
  - Consider a low threshold for offering testing for all infections – risk assessments assist with appropriate STIV/BV testing but are difficult to implement in some situations
  - Especially in the presence of other STIs
  - For those from rural/regional/remote areas
- **HIV**
  - Confirm HIV immune status (history of prior vaccination or serology) and vaccinate if not immune
- **TRICHOMONIASIS**
  - Test those from rural/regional/remote areas

#### How far back to contact trace:

- **HEPATITIS A**
  - Blood Anti-HAV Ig-total
- **HEPATITIS B**
  - Blood HIV Ab/Ag
- **HEPATITIS C**
  - Blood Syphilis serology
- **CHLAMYDIA**
  - First pass urine (at any time of the day)
- **GONORRHOEA**
  - Endocervical swab
- **SYPHILIS**
  - Primary syphilis – 3 months plus duration of symptoms
  - Early latent syphilis – 12 months
- **TRICHOMONIASIS**
  - Vaginal swab

- Australian STI Management Guidelines: www.sti.guidelines.org.au
**STEP 3 continued…**

**Why contact trace?**
Contact tracing is conducted to prevent your patient from becoming reinfected and to reduce onward transmission of STIs/HIV.

**Whose responsibility is it to contact trace?**
It is the responsibility of the diagnosing doctor to initiate and document a discussion about contact tracing.

**How to contact trace:**

a) Introduce the reasons for contact tracing

“It’s important your partner(s) get treated so you don’t get infected again.”

b) Help identify which partner(s) need to be informed

Use cues such as location or events; use a non-judgemental approach; some people have more than one sexual partner who may require treatment.

“Think back to when and where you had sex recently or any special events.”

c) Explain contact tracing methods and offer choice

Clinician-initiated contact tracing:
- Means the diagnosing doctor, practice delegate or external service informs the contact(s) with the index patient’s consent
- Contact tracing can be performed anonymously or not (depending on the wishes of the patient)
- Anonymous contact tracing is the best option for HIV or when there are domestic violence concerns

AND

Patient-initiated contact tracing:
- Means your patient chooses to inform their own contact(s)
- Discuss with the patient how their contact(s) can be informed

**Provide the patient with information to give to their contact(s)**

**Different methods may be needed for each contact e.g. in person, phone, SMS, email, social media, referral to a specialist contact tracing support service (see below).**

“From what you’ve told me, there are a few people who need to be informed. How would it be best to contact them?”

d) Support your patient to notify their partner(s)

Provide STI factsheets, offer contact tracing websites and schedule a follow-up visit/phone call. Assistance could be provided to your patient to access contact tracing websites during the consult.

- [www.letthemknow.org.au](http://www.letthemknow.org.au)
  Information on STIs and advice for all patients. Online anonymous notification of contacts via SMS, email or letter.

  Information on STIs and advice for MSM. Online anonymous notification of contacts via SMS or email.
- [www.bettertoknow.org.au](http://www.bettertoknow.org.au)
  Information on STIs and advice for Aboriginal and/or Torres Strait Islander people. Online anonymous notification of contacts via SMS or email.
- [www.rypl.positivelife.org.au](http://www.rypl.positivelife.org.au)
  Mobile app for patients including STI information, partner notification advice and tools
- [www.endinghiv.org.au/sti/let-them-know](http://www.endinghiv.org.au/sti/let-them-know)
  Information on STIs and advice for MSM. Online anonymous notification of partners via SMS or email.

For chlamydia, consider use of patient-delivered partner therapy (PDPT) where it is unlikely partners will access testing/treatment.

**e) Document discussions in patient medical record**

Need more help to contact trace?

**Australasian Contact Tracing Guidelines**
NSW Sexual Health Infolink: 1800 451 624
Outside NSW contact your local sexual health clinic or [specialist support service](http://www.stitu.nsw.gov.au/gp).

PDPT is the practice of providing a prescription or medication to a patient diagnosed with chlamydia to give to their partner without that partner being assessed by the health care provider. More info: [Australasian Contact Tracing Guidelines](http://www.stitu.nsw.gov.au/gp) and contact your local Health Department for regulations in your state.

**Post-exposure Prophylaxis (PEP):** should be considered for recent contacts of HIV and HBV within 72 hours of exposure. In NSW contact your local sexual health clinic or the NSW PEP Hotline 1800 737 669 for advice. Outside NSW [www.getpep.info](http://www.getpep.info).
